

New Academy – South of the City

We are now over 7 months into the main project works and the works in general have progressed very well with no incidents to report and the good dry weather we have had through the early winter and xmas period has aided in maintaining the great momentum on site. You can see from the aerial picture inset that the main teaching block Steel frame is almost completed, all foundations to the buildings are completed and all drainage infrastructures almost completed also.

The other picture inset of the site at dusk reflects the hard work put in from all our men on site all day working through the dark mornings and dark evenings to achieve what they have thus far

Over February & March the whole steel frame will be completed and all stairs installed throughout the buildings, The main upper floors will installed and installation of the roofs and envelope to the building will have commenced on the Main teaching block. Again over this period the perspective of the site will change in leaps as the main frame comes to a completion.
