

## New Academy – South of the City

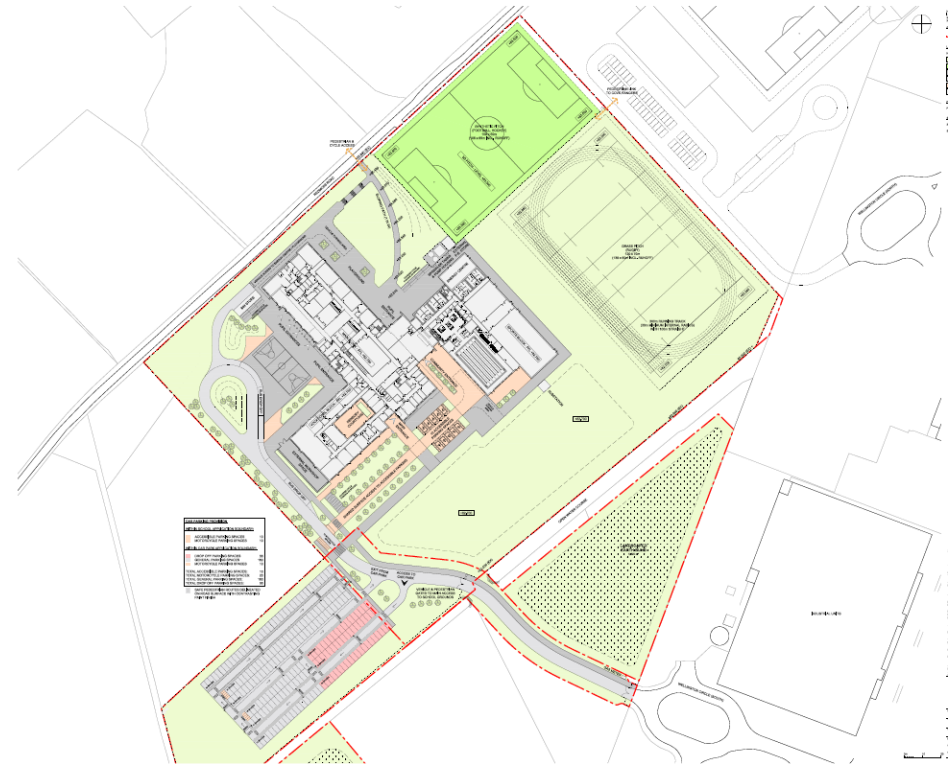

We are now 42 weeks into the main project works so not far away from the half-way point in the construction phase and the works in general have continued to progress very well with no incidents to report. You can see from the aerial pictures inset that the full structure of the Main teaching block, Sports block and Vocational wing are now completed with all stairs and upper floors installed.

At the End of March we participated in the National “Open Doors “event, “pic Inset” where the site was open to the public for 2 sessions on the day. The event attracted Students, Supply chain partners, general public and part of the unemployment sector from Oil & Gas who are looking to transfer their skills into Construction. The feedback from the day was great to see as gave all the visitors a great insight into the multifaceted modern day major construction project.

Over April & May we will be undertaking further bulk excavations with forming the new main carpark of the project and we will also be continuing with all the elements of the building envelope in terms of the roof, Windows, cladding and blockwork. We will also be carrying out works in relation to the NW boundary along Redmoss road so there will be traffic restrictions applied over the next few months for us to carry out the work safely for all.
